

# Weekly Market Update

Market Data as of Week Ending: 10/28/2022 unless noted otherwise

U.S. stock prices advanced last week as investor sentiment improved for risk assets. Investors have been concerned that companies would report less favorable earnings and analysts would be forced to lower expectations for growth next year. However, third quarter results have been largely in-line with expectations at around 2% growth and 71% of companies in the S&P 500 reporting earnings above estimates. It is worth noting that according to FactSet, if the energy sector is excluded, the S&P 500 would be reporting a 5.1% decline in earnings. Small and mid-sized companies generally outperformed their large cap peers, while the growth factor was a headwind. Ten of the eleven sectors recorded gains with the communication services sector as the only outlier due to large drawdowns from Alphabet (parent of Google), and especially Meta Platforms (parent of Facebook). Developed foreign and emerging markets stock prices ended the week mixed with results as emerging markets finished the week in negative territory.

U.S. Treasury yields declined as foreign central banks attempt to join the Federal Reserve in a more aggressive approach to reduce inflation. The 10-year U.S. Treasury declined and ended the week at 4.11%, while the 2-year yield was unchanged and remained at 4.55%. Long duration outperformed last week as all segments across the bond market recorded gains. High yield corporate bonds generally outperformed with the only exception among long duration, where investment grade took the top spot. Yields declined for both investment grade corporate and high yield bonds, finishing the week at nearly 5.9% and 9.0%, respectively.

Economic growth, as measured by gross domestic product (GDP), came in better than expected at 2.6% after adjusting for inflation. This was the first positive result for the year, bolstered by exports of oil and natural gas as supplies have been disrupted in Europe. Inflation has been persistently high, but wages have also increased and were reported at 5% higher, according to the employment cost index. Consumer spending has increased due in part to higher prices, but even after adjusting for inflation, spending increased 0.3% in September compared to one year ago. Housing continues to be a problem for economic growth as a flurry of negative reports came through this week. Inside the third quarter GDP report, residential investment fell at a 26% annual rate during the third quarter. Pending home sales declined more than 10% in September, the largest drawdown since the pandemic and prices declined for the second consecutive month in August, according to the S&P Case-Shiller Index. The European Central Bank (ECB) increased rates by 0.75% for the second consecutive meeting and noted that further increases may be necessary to reduce inflation.

## U.S. Equity Returns (Size & Style - Russell)

	Week			MTD			QTD			YTD

The market indexes discussed are unmanaged and generally considered representative of their respective markets. Index performance is not indicative of past performance of any particular investment. Indexes do not incur management fees, costs, and expenses. Indexes are not available for direct investment.

The S&P 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks across major industries.

The Russell 2000 Index is a market-cap weighted index measuring the performance of approximately 2,000 smallest-cap weighted American companies in the Russell 3000 index. The Russell 3000 Index is a capitalization-weighted equity index that provides exposure to the entire U.S. stock market. The index tracks the performance of the 3,000 largest U.S.-traded stocks which represent about 98% of all U.S. incorporated equity securities.

The MSCI Indexes were created by Morgan Stanley Capital International and serves as a benchmark of the performance of major international equity markets. The EAFE, with 826 constituents across 21 developed markets around the world excluding the US and Canada covers approximately 85% of the free float-adjusted market capitalization of each country. The Emerging Markets Index, with 1,393 constituents, captures large and mid-cap representation across 24 Emerging Markets (EM) countries and covers approximately 85% of the free float-adjusted market capitalization in each country.

U.S. Treasury Notes are guaranteed by the federal government as to the timely payment of principal and interest. However, if you sell a Treasury Note prior to maturity, it may be worth more or less than the original price paid. Fixed income investments are subject to various risk including changes in interest rates, credit quality, inflation risk, market valuations, prepayments, corporate events, tax ramifications and other factors.

Past Performance does not guarantee future results.
